

Project Executable Files

Date	10 July 2026
Team ID	xxxxxx
Project Name	Rising Waters - Flood Prediction System
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	NO
6	Deployed application URL (if hosted)	NO
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

Rising Waters-Flood Prediction System	
— Flood Prediction System ipynb	- Main Machine Learning notebook
— flood_dataset.xlsx	- Dataset used for training
— README.md	- Project overview and setup guide
— requirements.txt	- Python dependencies
— Project_Documentation.docx	- Project documentation
— Project_Presentation.pptx	- Project presentation
— Results/	- Prediction output screenshots
— Images/	- Architecture, workflow and project images
— Test_Files/	- Test cases and test results
— Model/	- Trained machine learning model (if available)
— GitHub_Link.txt	- GitHub repository link (optional)

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not Hosted(N/A)
Login Credentials (Demo)	Not required(N/A)
Platform / Hosting Provider	Google Colab & Github
Repository Link	https://github.com/adivetkumar-star/Rising--waters
Demo Video Link	https://drive.google.com/file/d/11FslwMu0Q8NLgsD4EKUSUJhtEEk7-HZI/view?usp=drive_link

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre- Requisites :

Python 3.10 or above
 Google Colab or Jupyter Notebook
 Required Python libraries (NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn, XGBoost)
 Flood Dataset (.xlsx file)

Step 1:

Download or clone the project from the GitHub repository.

Step 2:

Install the required Python libraries using:
 pip install -r requirements.txt

Step 3:

Open the project notebook (Flood Prediction System.ipynb) in Google Colab or Jupyter Notebook.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Dataset must be uploaded before running the project.	Upload the Flood Dataset (.xlsx) before executing the notebook.
2	Prediction accuracy depends on the quality of the dataset.	Use a clean and updated dataset for better accuracy.
3	Google Colab requires an internet connection.	Use a stable internet connection while running the project.
